

# Compact Filters

EMW® compact filters provide extremely long service life. Their medium structure and inlet flow masks are harmonized in design for optimum aerodynamic compatibility. This ensures low initial pressure drop which remains virtually constant throughout subsequent operation.

EMW® compact filters have high-quality glass-fibre media which provide consistently high filtration efficiency over the filter's service life. Available in Filter Classes M6-H14, they offer up to 40m<sup>2</sup> filter surface area in a space-saving compact configuration.

The filter medium is securely mounted on the plastic frame with a cast airtight joint. A continuous foamed-in-place seal over the joint further ensures airtightness.

## In Filter Classes M6-F9 and E10-H14
